Starfish Fact File

Name / Subject: (Whose fact file is it?)	Starfish
Habitat: (Where do they live?)	Starfish are found in oceans all over the world, from the polar regions to tropical seas.
Diet: (What do they eat?)	Starfish are carnivores and feed on a wide range of marine organisms. They typically eat molluscs like clams, mussels, and oysters.
Description: (What do they look like?)	1. Starfish have a unique star-shaped body, usually with five arms, though some species may have more. 2. Their bodies are covered with tough, spiny skin, which protects them from predators. 3. Starfish come in a variety of colours, including red, orange, yellow, blue, purple, and even green. 4. Starfish do not have eyes, a brain, a heart, or blood.
Life Span: (How long do they live?)	Most starfish have a lifespan of 5 to 35 years, depending on the species.
Any other 2 interesting facts:	1. Starfish have the incredible ability to regenerate lost limbs, and in some cases, can grow an entirely new body from just one arm. 2. Starfish can "eat" outside their bodies by pushing their stomachs out to digest prey like clams and oysters.
